

INNOVATION MIT SYSTEM

The innovative
sliding system

GEALAN-SMOOVIO®

More living
spaces

QUALITY OF LIFE WITHOUT COMPROMISE

NEW GENERATION OF SLIDING ELEMENTS

Living space is valuable, so it should be put to the best possible use. For the first time, GEALAN-SMOOVIO® combines the space-saving convenience of sliding solutions with extraordinarily compact design. This is made possible through a synergy of newly developed hinge parts, innovative profile geometry and optimised seals.

EASY TO COMBINE

Sliding windows and sliding doors fit nicely into the façade thanks to the diversity of decorative foils.

A RELAXED GLIDE AND SECURE SEAL

The comfort advantage that comes with sliding windows was previously often paid for with a lower-quality seal. A refined closing mechanism in the new GEALAN sliding system means this is no longer an issue.

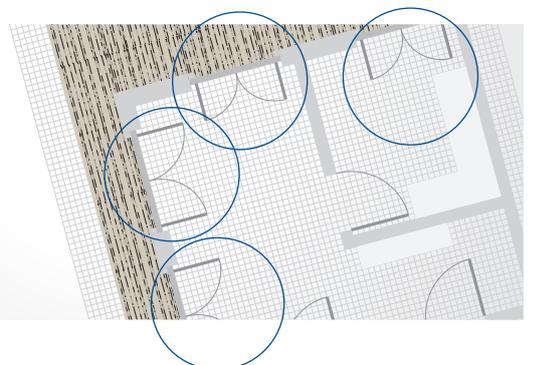

CREATE VALUABLE EXTRA SPACE

Sliding elements result in a great deal more living space, as these models require no pivot area for window and door leaves. This also means that the living space directly in front of the window can also be used. Sliding elements offer unbelievable potential to create valuable free space when planning layouts.

When designing a building, sliding elements offer a huge potential for creating useful open spaces.

Simple and leak-tight in wind and poor weather

Uninterrupted, all-round sealing levels ensure perfect insulation against outdoor influences when closed.

Effortless gliding
Saves and creates space
Wind-proof
Impermeable to driving rain
Excellent heat insulation
Optimum noise protection
Elegant, unobtrusive design

PREMIUM COMPONENTS

Intelligent components render their service invisibly. Special roller systems and extraordinary closing technology ensure smooth operation and excellent leak-tightness.
